

METROPOLITAN WATER RECLAMATION DISTRICT OF GREATER CHICAGO  
PRIORITY POLLUTANTS  
MONTHLY REPORTING FORM

RD-202

INSTRUCTIONS

The analysis and reporting of priority pollutants as required by the Metropolitan Water Reclamation District of Greater Chicago (District) shall be conducted in accordance with the following requirements:

I. Analytical Methodology

United States Environmental Protection Agency (USEPA) methodologies are to be employed. These methodologies are published in the Federal Register, Volume 49, October 1984.

- A. Volatile Organics (or purgeables) -  
USEPA Methodology 624 for analysis by purge and trap with Gas Chromatography / Mass Spectrometer (GC/MS).
- B. Semivolatiles (or acid/base/neutral extractables) -  
USEPA Methodology 625 for analysis by GC/MS.
- C. Pesticides and PCBs -  
USEPA Methodology 608 for analysis by GC with electron capture detector.
- D. Inorganics -  
40 CFR Part 136, Volume 49, No. 209, October 1989.

All analysis of pesticides and PCBs must achieve the Method Detection Limits (MDL) specified by the District. Analysis for volatile organics and semivolatile organics must achieve the Quantitation Limits (QL) specified by the District. A copy of the MDL and QL can be obtained by contacting the District at (312) 751-3044. Analysis for inorganics must achieve the Contract Required Detection Limits (CRDL) specified in Item I.D. above.

II. Mandatory Reporting Requirements

- A. Representative grab samples shall be collected on a monthly basis from each sanitary sewer discharge. A composite of four grabs is required.
- B. Samples specified in Item A shall be submitted to an independent laboratory for priority pollutant analysis. All 124 compounds listed on this monthly reporting form must be analyzed and reported on this form (one form for each discharge).
- C. Monthly reporting forms shall be submitted to the District no later than the 20th day of the following month.

III. Reporting Instances Where MDL or QL are Not Attainable

In some instances, the samples may contain high levels of the compound under analysis or interfering compounds which may overload the GC column, detector and/or mass spectrometer and a dilution may be required. In such instances, the information on the following page must be supplied, in addition to the monthly reporting form.

INSTRUCTIONS (Continued)

III. Reporting Instances Where MDL or QL are Not Attainable(Continued)

- A. The reason for the dilution and the degree of dilution. Explanation forms for high MDL's or QL's supplied by the District must be used by the analytical laboratory. This explanation form must be signed by the analytical chemist of the contract laboratory.
- B. For volatile and semivolatile compounds, the following must be provided:
1. Total ion chromatogram of the sample.
  2. Mass spectrum background, corrected.
  3. Mass spectrum background, unaltered.
  4. Reference standard spectrum.
  5. Ion profile of the two major peaks.
- C. For pesticides and PCBs, the following must be provided:
1. Chromatogram of sample.
  2. Chromatogram of reference standard.

- (1) Enter the analytical results for each of the above listed compounds or "ND" if the compound was not detected or below the QL or MDL reported by your consulting laboratory. Submit the certified laboratory report with this form.
- (2) Enter the QL or MDL attained by your consulting laboratory. All cases in which the QL or MDL reported by your consulting laboratory exceeded the prescribed QL or MDL must be documented, as indicated in the instructions on this form.
